24. Risk Factors

The value of the benefits that you may receive when you retire is not guaranteed. It will depend on a number of factors, for example the performance of your chosen investments, the amount of contributions or transfers, the age at which you take benefits and future annuity or drawdown rates. In particular:

- Some investments carry a higher level of risk than others and the value of your fund could be lower than the total amount invested.
- Investments into stock markets and/or exchanges and investments linked to these fluctuate in value, as does income derived from them. Past performance is not a reliable indicator of future returns.
- Inflation will reduce the purchasing power of your fund.
- The basis and amount of tax benefit could change in the future.
- Governments and/or the laws and/or the policies of Gibraltar, the UK and/or another relevant jurisdiction relating to pensions and retirement benefit could change in the future. This may affect the benefits that you can take from the Plan in the future.

IMPORTANT NOTICE

Members are subject to tax on capital and income in their country of residence, and it is important to seek advice from a tax professional in that country. If investments are denominated in a currency other than that of the country where you are resident any returns may increase or decrease as a result of currency fluctuations.

Some jurisdictions do not recognise tax free cash, and if you are resident in one of these jurisdictions there may be a tax liability on this sum. Please check before taking any benefits.

All references to taxation are based on our understanding of current Gibraltar taxation law and practice as of the date of this document, and may be affected by future changes in legislation and the individual circumstances of the investor.
